Abstract

The present invention relates to alkyne compounds of general formula I

$$R^{1}$$
 $N-X-Y-Z-W-A-B$

wherein the groups and residues A, B, W, X, Y, Z, R¹ and R² have the meanings given in claim 1. The invention further relates to pharmaceutical compositions containing at least one alkyne according to the invention. In view of their MCH-receptor antagonistic activity the pharmaceutical compositions according to the invention are suitable for the treatment of metabolic disorders and/or eating disorders, particularly obesity, bulimia, anorexia, hyperphagia and diabetes.
